

INTRODUCTION

These *Design & Construction Standards* are intended to create a common basis for the design, construction, maintenance, renovation and general care of facilities at Sam Houston State University. The standards are the result of years of experience in designing, building, and operating facilities on the campuses, with a historical knowledge of what has served the University well. As such, they form the preference and knowledge base for all facilities on the campuses. It should be clearly understood by all persons using these standards that they are not specification documents, nor are they procedures for construction. Design and document preparation continue to be the design professional's responsibility. Means, methods, techniques, and procedures remain the Contractor's responsibility. These standards are to be used by all persons involved with facilities on Sam Houston

STATUS OF THE DESIGN & CONSTRUCTION STANDARDS

The *Design & Construction Standards* are the property of Sam Houston State University at all times and are intended solely for projects on SHSU campuses. They are not to be copied for use by others nor used on projects outside of SHSU campuses.

These Standards shall be provided to those individuals and firms who are providing design and construction services to the University.

No portion of this manual may be reproduced in any specification intended to be a part of construction documents without the prior written permission of Sam Houston State University Facilities Planning and Construction.
